

ProctorGuard

Online Exam Instructions

PLEASE READ THIS DOCUMENT FULLY BEFORE STARTING YOUR EXAM

ProctorGuard is an AI-assisted online proctoring system. It uses your camera, microphone, and screen to keep the exam fair for everyone. It is designed to allow normal human behaviour — thinking, reading, glancing at your screen — and only flags genuinely suspicious activity.

1 Before You Begin — Requirements

EQUIPMENT	ENVIRONMENT
• Laptop or desktop recommended; phones/tablets supported with reduced features. • A working webcam facing you, at eye level if possible. • A working microphone. • A stable internet connection. • Up-to-date browser — Chrome or Edge strongly recommended.	• Sit in a quiet, well-lit room, alone. • Light should fall on your face — avoid a bright window behind you. • Clear your desk of books, papers, notes, phones, second devices. • Disconnect any external or second monitors before starting. • Close all other apps, tabs, chats, and notification software.

2 How to Attend the Exam — Step by Step

- 1 Log in to the exam portal using the link and credentials provided to you.
- 2 Select your exam from the list when it becomes available.
- 3 Grant Camera, Microphone and Screen-Share permissions (full details in Section 3). The exam cannot start until all required permissions are granted.
- 4 Capture & Verify Identity — look straight at the camera in good light with your full face visible. This becomes your reference photo for the whole exam.
- 5 Enter Fullscreen when prompted and stay in fullscreen for the entire exam. (On mobile this step is skipped automatically.)
- 6 Read each question carefully and answer it. Use the navigation buttons to move between questions and sections.
- 7 Watch the timer at the top. Some exams have per-section time limits — a section may lock once you move on.
- 8 Your answers auto-save every few seconds. If your connection drops, you can usually resume where you left off.
- 9 Click Submit when finished. If the timer runs out, the exam submits automatically.
- 10 Optionally rate the exam and leave feedback after submitting.

3 How to Grant Permissions — What to Allow

When you start, your browser will show a small popup asking for access. You must choose Allow / Share for each item below. Nothing is recorded until the exam actually begins, and recording stops the moment you submit.

What you are granting, and why

- **Camera** — confirms you are present and matches your enrolment photo.
- **Microphone** — detects background voices or someone talking to you.
- **Entire Screen** — shows the proctor exactly what is on your screen (desktop only).

On a laptop / desktop (Chrome or Edge)

- 1 Click “Allow & Continue” in the exam screen.
- 2 A popup appears just under the address bar — click Allow to grant the camera and microphone.
- 3 A second popup asks you to share your screen. Choose the Entire Screen tab (not “Window” or “Tab”), select your screen, then click Share.

Allow location access if asked — it only confirms your general exam location.

Allow camera and microphone access so identity and audio checks can run.

Choose "Entire Screen," select your screen, then click Share to finish setup.

Tip: If the Share button is greyed out, first click the picture of your screen to select it — Share then becomes clickable.

If a permission was blocked / denied (desktop)

- 1 Look at the right end of the address bar for a small camera icon (it may have a red cross).
- 2 Click it, choose "Always allow" for camera and microphone, then reload the page.
- 3 Start the exam again and choose Allow / Share this time.

On a mobile phone or tablet

- 1 Tap "Allow & Continue".
- 2 When the browser asks, tap Allow for the camera, then Allow for the microphone.
- 3 If you previously tapped Block: open the browser menu → Site settings → Permissions, set Camera and Microphone to Allow, then reload.

On phones and tablets, screen-sharing and forced fullscreen are turned OFF automatically — you only need to allow the Camera and Microphone. All other proctoring (face, gaze, phone, audio and tab checks) still applies, so the same rules in Sections 5 and 6 apply to you.

4 Violations the System Detects

The system watches continuously. Brief, momentary events are ignored — only sustained or clear behaviour is recorded, and each violation may include a snapshot for the proctor. Detection windows below have been shortened to half of their previous duration, so the system now flags sustained issues sooner.

Violation	What triggers it	When
NO_FACE	Your face is not visible	after ~5 seconds
MULTIPLE_FACES	Another person appears in view	after ~1.25 seconds
GAZE_AWAY	Head turned far from the screen	after ~4.5 seconds
PHONE_DETECTED	A mobile phone appears in view	on repeated detection
ANOMALY_OBJECT	Book, notes, 2nd laptop or monitor	on repeated detection
AUDIO_DETECTED	Sustained talking / conversation	after a few seconds
TAB_SWITCH	Leaving the exam window / changing tabs	immediately
FULLSCREEN_EXIT	Exiting fullscreen (desktop)	immediately
COPY_PASTE	Copy, paste, print, save or screenshot	immediately
IDENTITY_CHANGE	Face no longer matches enrolment	on mismatch
LOCATION_CHANGE	Significant change of physical location	on detection

Violations are graded High / Medium / Low. Some exams end automatically once configured limits are reached.

5 Do's and Don'ts

DO	DON'T
✓ Keep your face clearly visible and well-lit at all times.	✗ Do not switch tabs, minimise, or exit fullscreen.
✓ Stay in fullscreen for the whole exam (desktop).	✗ Do not let another person come into camera view.
✓ Sit alone in a quiet room with a clear desk.	✗ Do not use a phone or any second device.
✓ Keep a stable internet connection; reconnect quickly if dropped.	✗ Do not keep notes, books, or papers visible.
✓ Close unnecessary applications and notifications before you start.	✗ Do not copy, paste, print, or take screenshots.
✓ Follow every on-screen warning immediately.	✗ Do not cover your face or speak unnecessarily.
	✗ Do not disconnect your camera, microphone, or screen sharing.

6 Troubleshooting

- **Permissions denied?** Allow them from the camera icon in the browser address bar (desktop) or Site settings (mobile), then reload.
- **Sharing the wrong thing?** Re-share and pick Entire Screen, not a single tab or window.
- **Face not detected?** Improve your lighting and face the camera directly.
- **Extra monitor warning?** Disconnect external/second monitors.
- **Internet dropped?** Reconnect — your answers are auto-saved and you can resume.
- **Left fullscreen by accident?** Re-enter fullscreen straight away.

7 Privacy

Your camera, microphone and screen are recorded only during the exam, purely for integrity review by authorised proctors. Face signatures are stored securely according to your organisation's retention policy.

If you experience a genuine technical issue during the exam, note the time and contact your exam administrator immediately.
